

Chan Siaw Wei

Singapore ✉ siawwei98@gmail.com ☎ +65 90570193 📺 in/siawwei

Summary

Software engineer specialising in scalable web applications with modern framework. Experienced in end-to-end development, from building intuitive UI to API integration, CI/CD automation, and shaping architecture for long-term maintainability.

EXPERIENCE

Senior Software Engineer

Paypal

Jan 2026 - Present, Singapore

- **Leverage AI** to automate migration of legacy PayPal codebases and integrate services like PayLater, reducing manual efforts through preconfigured commands
- **Applied harness engineering principles** to maintain Claude Skill quality, tracking known issues, running AI-Assisted regression check pre-merge, and automatically surfacing new issues back into the registry

Senior Frontend Software Engineer

Bytedance

May 2021 - December 2025

- **Build Data Warehousing solutions**, gather requirements and author Product Requirement Documents and Architecture Decision Records.
- **Led transition to Trunk Based Development**, reducing average merge time to under 3 days and cutting merge overhead by reducing huge branches.
- **Implemented a Feature Flag System** with a shared Chrome extension for easy access and quick feature toggling. successfully drove team-wide adoption with controlled rollouts and reducing frontend rollbacks by 90%.
- **Integrated automated E2E testing with Playwright** for all new features and automating test run in CI/CD pipelines, boosting release confidence and cutting post release defects. Also improve code stability with Storybook. Leverage [Midscene](#) for prompt driven test case generation,
- **Led the migration of core component library**, refactoring over 1000+ usage references; developed a clear upgrade strategy and coordinated the rollout to ensure backward compatibility and minimize disruption. **Build shared React component library** for crossed-team.
- **Automated E2E Testing**: Leveraged [Midscene](#) and Playwright to setup prompt-driven test cases generation

Software Engineer

Semantia

January 2020 - March 2021, Melbourne

- Contributed to Progressive Web App (PWA) development using Ionic Native and Angular in a fast-paced startup environment;
- Integrated WordPress as backend via RESTful APIs, and supported CI/CD pipeline setup and website maintenance.

PROJECT

AI Job Diagnosis Chatbot

- Built a dynamic, protocol-driven frontend chatbot using AG-UI SDK for AI-assisted job diagnostics on Spark, Hive, Ray jobs
- Implemented runtime-rendered chat UI, human-in-the-loop interactions, and custom forms based on backend AG-UI instructions.
- Developed persistent chat sessions & historical messages retrieval, with adaptive chat UI and live updates
- Implemented downloadable report generation and dynamic workflow actions, fully integrated with backend event drive updates
- Extract core components with AG-UI protocol integration in npm package to reuse across multiple projects for rapid frontend development

Blog Management System with Headless CMS

- Built a headless CMS with a Rich-Text Editor and blog renderer, enabling non-technical users to publish content independently with focus on seamless third party integration, reducing development time and cost.
- Implemented **Server-Side Rendering (SSR)** to optimize SEO and initial load performance.
- Developed a Backend-for-Frontend (BFF) API layer, fully documented with Swagger for clear service contracts and improved cross-team collaboration.

EDUCATION

Bachelor of Information & technology

Swinburne University of Technology • 2020

- Major in Software Development

SKILLS

- **Programming Language**: Typescript, Javascript, C#
- **Frameworks & libraries**: React, Angular, Next.js, .NET Core, NodeJS, Playwright, Jest
- **Technologies**: Firebase, MongoDB, MYSQL, Swagger

Language: English, Chinese
